Welcome to the Zine Union Catalog!  
Use the search bar below to begin.

*Partner Libraries:*

A free, open-source union catalog where users can search multiple zine collections in one centralized place.

Built with Collective Access, using the PHP programming language.

# What does it do?

The user can search the Union Catalog for particular objects (e.g. physical zines), authors, and collections.

A “mapping schema” dictates how metadata should be organized when exporting a collection.

This means any collection can be added to the Zine Union Catalog if metadata follows this map.

Relationships can be made to link elements together, e.g. an object that is “part of” a collection or an entity that is the “creator” of the object.
